

The calculators shown in this pamphlet are both used extensively, not only in England but all over the British Empire, U.S.A., Holland, Switzerland, in fact anywhere where Motor Racing and Car Rallies are popular.

The Mark I. in particular has been enthusiastically received by the thousands of entrants in Car Rallies and Trials, while the Mark II. is used by many famous racing drivers.

Blackwell *Calculators*

The Mark I. model illustrated above shows, at a glance, the answer to any problem involving speed, time and distance, whether in miles or kilometres. Its operation is extremely simple and requires no mathematical knowledge whatever. It will be found of the greatest value to those engaged or interested in Rallies or Trials.

SIZE 7 1/2" DIAMETER

The Mark 2 Model is a double sided instrument which has been designed specially for those interested in Motor racing. One side is a lap speed calculator and the answers to all problems concerning lap speeds, times and distances can be read instantly. The time scale being calibrated in minutes and seconds makes settings to very fine limits a perfectly simple operation.

The reverse side carries the calculator for problems on Index of Performance, which is, of course, the ratio between the actual distance covered and the set qualifying distance. Most important handicap races today use this method of determining the final placings, and this calculator will be found of great value to Team Managers and Pit Personnel.

Although the scope of the Mark 2 model is almost unlimited, it must be stressed that it is extremely simple to operate and requires no mathematical knowledge. Full operational instructions are, however, included with each instrument.
